

cyberJack® RFID comfort

for the new ID card

What is RFID?

Radio-Frequency Identification technology permits contactless communication between a smartcard and a card reader. The number of systems which support this radio technology is on the increase. For example: contactless payments using cash or credit cards, time recording, access control, animal identification, goods and inventory management.

Besides employee ID cards and electronic passports, the new electronic ID card communicates with the reader via RFID.

This modern technology simplifies smartcard handling and facilitates the use of many new applications.

The new ID card

Besides its official function as identification, the new ID card (nID) also serves for identification on the Internet. The so-called electronic proof of identity (eID) significantly increases the security and convenience of authentication on the Internet. The requisite personal data of the ID card holder are stored in the RFID chip enabling one to prove ones identity electronically, for example when shopping Online or when visiting an Online town hall.

It goes without saying that data can only be read out if the ID card holder has released them by entering a PIN.

Furthermore the nID can only be used for a qualified electronic signature (eSign) in compliance with the Digital Signature Act. Therefore, for example documents can be signed electronically with a legally-binding signature without the necessity of a handwritten signature.

cyberJack® RFID smartcard reader for the nID in the overview

Designation	cyberJack® RFID basis	cyberJack® RFID standard	cyberJack® RFID komfort
Reader category according to TR-03119	Basic reader	Standard reader	Comfort reader
Contactless interface ISO/IEC 14443	Yes	Yes	Yes
Contact interface: ISO/IEC 7816	No	Yes	Yes
PC interfaces	USB 2.0, CCID, PC/SC	USB 2.0, CT-API, PC/SC, SECODER	USB 2.0, CT-API, PC/SC, SECODER
Plug & play, no installation required	Yes (CCID)	No	No
LC display / number of characters	No	Yes / 2 x 16 alphanumeric	Yes / 2 x 16 alphanumeric
Display backlight	--	No	Yes
Secure PIN input / number of keys	No / 0	Yes / 16	Yes / 16
Security status display	LED (green)	LED (green/yellow/blue)	LED (green/yellow/blue)
Terminal authentication with EAL4+ module (for nID QES)	No	No	Yes
BSI quality seal	Yes	Yes	Yes
ZKA (Central Loan Committee, German) secoder approval	No	Yes	Yes
Security check ITSEC E2 / high	No	Yes	Yes
Confirmation in compliance with Signature Act / Signature Regulations for contact cards	No	Yes	Yes
Confirmation in compliance with the Signature Act / Signature Regulations for nID QES	No	No	Yes
Secure firmware update	Yes	Yes	Yes
Supported operating systems	Windows 2000 / XP / Vista / Windows 7 / Server 2003 - 2008 R2, Linux, Mac OS X, div. terminal servers		
Conformity	CE, conforms to RoHS, and WEEE.	Central Loan Committee (ZKA), WHQL, CE, conforms to RoHS, and WEEE.	

Serviceable cards and applications

Designation	cyberJack® RFID basis	cyberJack® RFID standard	cyberJack® RFID komfort
Serviceable cards*			
nID (via ID cardApp)	Yes	Yes	Yes
Other RFID cards in compliance with ISO/IEC 14443	Yes	Yes	Yes
Bankcards (Online banking, cash card)	No	Yes	Yes
Signature cards in compliance with ISO/IEC 7816	No	Yes	Yes
Electronic health insurance card	No	Yes	Yes
Serviceable applications* (examples)			
Contactless cards (ISO/IEC 14443)			
eID	Yes	Yes	Yes
nID QES (EGVP, ELSTER, ...)	No	No	Yes
VDV application (Association of German Transport Companies)	Yes	Yes	Yes
Time recording	Yes	Yes	Yes
Contact cards (ISO/IEC 7816)			
FinTS / HBCI	No	Yes	Yes
Secoder banking	No	Yes	Yes
FES / QES (EGVP, ELSTER, ...)	No	Yes	Yes

*For these applications you may need additional software and/or smartcards from third-party vendors. You can obtain home-banking smartcards from your bank, signature cards from trust centres (other info at www.reiner-sct.com).

The comfort reader for full nID assistance

The **cyberJack® RFID komfort** combines excellent design with extensive functions. It supports almost all contact smartcard applications, such as Online banking via HBCI / FinTS, secoders and EBICS as well as cash cards and qualified electronic signatures. Equally, **cyberJack® RFID komfort** also supports contactless RFID smart cards and all their functions with maximum security, for example, the nID in conjunction with the ID cardApp.

Thanks to the fact that the authorised person and the authorisations are displayed on the big, illuminated LC display,

you have full control over release of your personal data. Thanks to the secure PIN input via your own keyboard, the secrecy of your PIN is guaranteed at all times.

The modular firmware management permits the use of the **cyberJack® RFID komfort** in many applications; therefore, purchasing a single reader gives you a secure investment for multifunctional use over many years.

cyberJack® RFID komfort

Design, convenience and security

The highlights at a glance:

- Illuminated LC display
- Certified secure PIN input
- Capable of multiple functions (e.g. Online banking, ELSTER)
- Updateable
- ZKA (Central Loan Committee, German) secoder approval
- TÜV-IT and BSI-certified
- Confirmation in compliance with the Signature Act / Signature Regulations
- Integrated security module in compliance with EAL 4+
- BSI quality seal
- Free support
